

## **The Company**

ProSolut S.A., Consulting Engineers, based in Wecker, Luxembourg, was founded in January 1998 by four friendly engineers from different disciplines, who had previously already been working together successfully for several years as consulting engineers in another Luxembourgian engineering office. As a result, the newly founded company was characterized from the very beginning by competent and high-quality consulting advices.

This "company philosophy" continues to be consistently pursued today by the founders actively involved in the projects as well as the very committed employees, so that over the course of two decades the company has developed into a well-regarded and highly respected service provider on the Luxembourg market.

In ProSolut S.A. you find a competent team, which takes care of your project and your questions with commitment and diverse experience.
